Software Engineer

We have worked on small automation tools, business solutions, and even small SaaS startups. We have built legitimate websites with real branding and created digital designs for partner companies. Throughout the process, we learned how to work as a team, organize scalable products, and create business-focused informational landing pages.

Worked as:

- Backend developer & Frontend assistant

Backend Engineer

We built a complete e-commerce platform for selling and delivering goods across Uzbekistan. I was primarily responsible for the back-end development and also implemented many major front-end features that required deep integration with the back end.

Unfortunately, the website and business later faced financial difficulties due to challenges with physical delivery and logistics. However, we are still gradually recovering parts of the ecosystem, slowly but reliably.
